

## Buffer Press

The Buffer Press allows a full use of the production capacity thanks to a fast discharge of the batch mixer. It ensures a continuous filling process and provides a temperature stabilized intermediate storage protected from external effects.

### Characteristics

- Gas tight
- Adjustable filling pressure
- Special sealing system of the pressure plate
- Easy to clean and maintain due to a good accessibility

### Design

- The inner surface of the cylinder is automatically cleaned due to a high standard surface treatment and a special sealing system
- Level monitoring by means of measuring system
- Vertical and horizontal execution

### Technical Data

- Operation volume                      1000 -8000 l

### System solution

The Buffer Press may be extended with additional components for a further automation of the mixing process and to ensure an efficient production up to the filling.

- Vacuum Mixer VMH / VMV and Vertical Vacuum Mixer Phoenix VMP
- Drum and Pail Filling Unit FHA

### Options

- PLC control with graphic panel
- Heat- and coolable
- Seal flushing system statical or with pump
